TITLE : OPTICAL TRANSMITTER

ABSTRACT : PURPOSE: To provide the optical transmitter in which a wavelength of an output light is stable independently of a secular change in a light source and an output light intensity and the wavelength is easily set.

CONSTITUTION: The optical transmitter provided with a light source drive section 52 controlling the intensity of an output light of a light source 51 and connected to the light source 51 whose emitting light wavelength depends on temperature, a temperature detection section 53 detecting the temperature of the light source 51 and a temperature control section 54 controlling the temperature is provided with a wavelength control section 57 detecting a deviation of an emitting light center wavelength based on the luminous intensity of the wavelength of the part of the output light and feeding back a temperature reference value to the control section 54 based on the deviation.
